Summary

Full-stack software engineer who builds and ships production web features end to end. Recently delivered config-driven, multi-step registration flows and reusable UI across a hotel platform's admin dashboard and guest app. Comfortable across React, Next.js, and Node.js, and used to owning features from design through review to release.

Skills

Languages	JavaScript, TypeScript, C++, SQL
Frontend	React, Next.js, Redux, Zustand, TanStack Query, Formik, Tailwind CSS, HTML5, CSS3
Backend	Node.js, Express.js, REST API design, JWT auth
Databases	PostgreSQL, MySQL, MongoDB, Redis, Prisma ORM
Cloud & Tools	AWS (EC2, RDS, S3, Amplify, Cognito), Git, GitHub, Postman, Jest, Linux
CS Fundamentals	Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

ReactJS Intern

Jun 2026 – Sep 2026

Guestara (hotel guest-experience platform)

React, Next.js, Redux, Zustand, TanStack Query

- Shipped 15+ merged PRs across two production React apps (admin dashboard and guest app) over a three-month internship.
- Built the guest registration system as three config-driven, multi-step forms in React with multi-guest support and Zustand-backed draft persistence, streamlining two flows to as few as three steps.
- Engineered Aadhaar verification end to end with Formik and Tesseract OCR, gating on OTP and auto-reading the number from the image, plus a matching Dashboard add-on to enable it as a form type.
- Isolated field visibility, validation, and submit payload per guest via a shared hook across all three forms, removing cross-guest data leakage into the API payload.
- Delivered an end-to-end custom-fields system with reusable React components and per-type validation, letting admins define their own registration questions.
- Traced slow dashboard load to the full ~19 MB bundle shipping on initial load, and specified React.lazy route splitting to defer non-critical code and cut it toward ~4 MB.
- Built whole-config draft-change tracking that diffs live Redux state against the server snapshot to flag drifted config, reconciling state/snapshot shapes to keep the diff reliable.

Software Developer Intern

May 2024 – Jul 2024

Kalam Solutions

Node.js, Express, MongoDB, React

- Built full-stack features with the MERN stack, developing REST APIs in Node.js/Express and React components, and securing protected routes with JWT authentication.
- Implemented Redux-based state management and integrated frontend components with backend endpoints, iterating through senior code reviews in an agile sprint workflow.

Projects

Outly | Cold-outreach automation with an async job-processing backend 🏠 📄
PostgreSQL, Next.js

Node.js, TypeScript, Redis,

- Architected a Redis-backed Node.js worker queue that runs email sending asynchronously, decoupling the Express API from SMTP to cut request latency to sub-50ms so requests never block on delivery.
- Engineered an adaptive rate-limiting and round-robin sender-rotation engine that raised daily sending capacity ~4x across sender profiles while staying within external API limits and protecting reputation.
- Secured data integrity with PostgreSQL transactions, eliminating orphaned records and resolving race conditions across concurrent workers.
- Built an in-browser CSV parsing layer in React/Next.js that handles 10,000+ row datasets client-side, removing the server upload round-trip.

Habiful | Property management platform 🏠 📄

Node.js, Express, PostgreSQL, Prisma, AWS, Next.js

- Designed REST APIs and backend workflows in Node.js/Express for application approval, lease creation, and availability checks, with role-based access via AWS Cognito and JWT, deployed on EC2, RDS, and Amplify.

Education

Indian Institute of Information Technology and Management, Gwalior
Integrated B.Tech + M.Tech, Information Technology

2020 – 2025
